Paper Lantern with Stars & Fireworks

Use with an LED tea light only! · to color

print at 100%

1. Cut out the rectangle. Cut out the white stars and dots with a craft knife (grown-ups only!) or pointed scissors – the small firework dots also work with a hole punch.
2. Glue tracing paper or baking paper onto the back – then the stars and fireworks glow.
3. Roll it into a tube (about 3 in wide) and glue it at the tab. Place it over an LED tea light or a jar with LED fairy lights.
4. Important: never use a real candle – paper burns!
